Closed Sampling MK 12 Winder (4-inch)

Applications

Wherever there is a need to take representative samples of liquid cargo on-board, without allowing the leakage of vapour during the process, this equipment offers an ideal solution.

Soundly constructed, light and manageable, practical, operator-friendly and durable in service, it offers a cost-effective solution to the problem of liquid sampling under closed conditions.

MK 12 Winder mounted on our
4-inch full-flow ball valve and flange

The MK 12 Winder offers the following benefits:

- fully enclosed winding mechanism
- mechanically-driven depth counter
- transfer of the sample to collecting bottle without mess, thanks to a novel emptying system
- "bayonet" fitting between sampler and winder, giving quick changeover between sampling devices, while ensuring electrical continuity throughout the system, for reasons of safety.

In operation, the winder is mounted directly onto the vessel's vapour lock valves.

Specifications:

Height Closed	80 cm	**Stainless Steel Tape Length**	32m x 16mm
Height open	92 cm	**Weight**	14kg

The system is fully compatible with a wide range of sampling and dipping devices from the **UK Sampling Gauges Ltd** range. Please ask for full details or scan the QR code.
